Primary Problem Statement

Patients need a simple and reliable way to find doctors and book appointments without depending entirely on phone calls, manual clinic visits, or confusing processes. Doctors need a structured dashboard to view and manage appointments.

User Problems

User	Problem
Patient	Difficulty finding available doctors and booking appointments quickly.
Older patient	Email/password based systems may be confusing; phone-based login is easier.
Doctor	Needs organized view of patient appointments and requests.
Clinic/Healthcare provider	Needs digital appointment records and role-based workflows.

Success Criteria

- Patient can register and login.
- Doctor can register and login.
- Doctors are stored and fetched from MongoDB.
- Patient can book appointment.
- Dashboards display role-specific information.
- Application is deployed and accessible online.
