

Project Development Report

Implementation Details for HealHub

Project	HealHub
Tagline	Care At Your Fingertips
Domain	Healthcare / Doctor Appointment Booking
Stack	MERN Stack
Generated On	13 June 2026

Frontend Implementation

- Created React Vite project.
- Built reusable components: Navbar, Hero, SearchDoctor, Specializations, HowItWorks, Testimonials, Footer.
- Created pages: Home, Login, PatientRegister, DoctorRegister, Doctors, Appointment, PatientDashboard, DoctorDashboard, MyAppointments.
- Added React Router routes for page navigation.
- Used api.js to call backend APIs.
- Added HealHub logo and favicon.

Backend Implementation

- Created Node.js and Express backend.
- Connected MongoDB Atlas database using Mongoose.
- Created routes for doctor listing, registration, login, and appointments.
- Deployed backend on Render.
- Configured CORS and environment variables.

Testing and Fixes

Issue	Fix
Doctors page blank on Vercel	Replaced undefined hasBackendDoctors with isUsingBackend.
Backend unavailable on frontend	Added VITE_API_BASE_URL on Vercel.
Favicon too small	Created icon-only favicon instead of full logo.
Registration pending	Checked Network tab and backend Render availability.

Current Deliverables

- Live React frontend.
- Live Express backend.
- MongoDB connected.
- Doctors API returning database doctors.
- Role-oriented frontend pages.
- Project documentation PDFs.
